Tooling Intelligence

SupplyPort

SupplyPort's user-friendly software delivers intelligent inventory management to your supply chain from start to finish. SupplyPort, the virtual administration centre for our vending devices, collects and processes transaction data, controls inventory levels and manages automatic replenishment to put your inventory data to work like never before.

Key Features:

- Comprehensive and configurable reporting package for real time or scheduled reporting
- Automated ordering and replenishment routines to ensure stock security 24/7
- External hosting requires minimal internal IT support
- Easy to integrate with customer purchasing and manufacturing software
- Full traceability and transaction histories maintained and available on line

Product Control

SUPPLYPORT tracks the movement of inventory and assets (products) by anyone with access to the system (users). Control as much or as little as you want, at the vending machine or at the port.
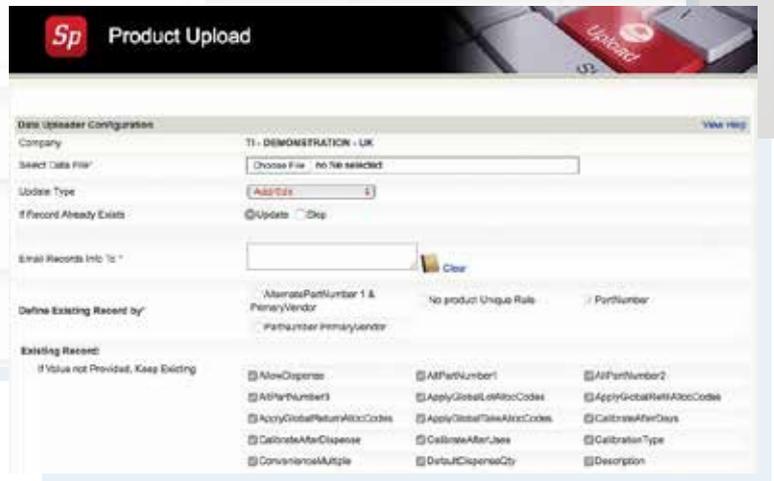

PRODUCT TYPES Define products as reuseable, returnable, check-in/check-out or absolute control.

PRODUCT ACCESS LIMITS Restrict user access to products based on criteria specified in their access group and maintain strict control over high value, mission critical items. Lockdown items to prevent access.

PRODUCT KITS Group two or more products to provide straight forward access for users requiring multiple items. Products within a kit can also be dispensed individually.

PRODUCT IMAGES Attach individual photos to each product in the database for easy recognition at the vending machine.

SUPPLYPORT UPLOADER
Transfer large product, user and other data files to the port from spreadsheet data. Receive e-mail confirmation that your data additions and inserts have been processed.

SUBSTITUTES When an item is unavailable, guide users to an alternative or replacement product to prevent disruption to the workflow.

FIFO Enable 'first in first out' dispensing to ensure the correct rotation and management of products at risk of expiration.

ALLOCATION CODES Company defined tracking codes can be used to assign product costs to specific departments, cost centres, job numbers etc. Allocation codes can also be used to gather information about how products are being used or to guide users through product selection.

Ordering

SupplyPort's automated ordering system provides fast, reliable and accurate decision making to your supply chain to prevent costly disruption to the workflow.

Complete	0110	7110	2016-01-26 10:51:11

- Easy to integrate with external purchasing systems and distributor systems
- Individual product rules trigger orders and alerts
- Orders can be scheduled for regular automatic delivery or run on an ad-hoc basis, for example during increased production runs
- Orders are linked to product refills at the vending machine. SupplyPort's Rapid Refill function saves time at the vending machine during re-stock
- Limit access to order authorisations including hold for review, adjust, cancel when late and void
- Access complete order logs and authorisation history

Reporting

SupplyPort's extensive reporting capabilities provide information and insight across the supply chain, from order point to end user.

All product movements are logged and traced to each user's unique login. User logins can be synchronised with existing clock number or employee identities. Accountability promotes responsible consumption when all transactions are traceable.

- Discrepancy Snapshot by

- Schedule automated rolling reports
- Customisable report columns, filters and sorting
- Multi-format reports include XCL, XML and CSV
- Delivery options include e-mail and FTP

- Track inventory
- Identify trends
- Investigate discrepancies
- Explore system operation

Service and Support

Our web-enabled vending machines deliver real-time data to the SupplyPort for access to your inventory 24/7.

- Hosted service in secure data centre, fully staffed 24/7/365
- No on-site servers and little on-site IT involvement required
- Cloud based device backup for guaranteed data accessibility
- Updates are delivered with no interruption to the users or on-site IT
- Vending devices function seamlessly during any network outages or disruption

Tooling Intelligence

We offer a comprehensive suite of Point-of-Use vending solutions for a wide range of industrial applications. Our products are built and configured in the UK and fully supported by our dedicated and qualified expert engineering team.

- Dedicated telephone and e-mail support
- Proactive monitoring of system uptime
- All equipment fully configured and tested before installation
- UK Demonstration and Training Centre with "live" system installations
- Full training for all system users
- Data backup and retrieval
- Customised system setup including reports and orders
- Out of hours and emergency service cover available
- Remote system diagnostics and service capability
